

Moving Forward to Meet Needs in Mathematics Learning and Teaching

In response to feedback from teachers and parents, Peninsula School District teachers began looking for ways to address the concerns regarding our current elementary and middle school math programs.

Specifically, these include:

- ≤ the need for additional practice of basic skills
- ≤ ways in which parents can understand the math currently being taught to their child and ways in which they can help at home
- ≤ a focus on preparing students well for meeting math standards and preparing students for future math challenges
- ≤ the desire to provide rigor and challenge for all students

The revised editions of Investigations (K-5) and Connected Math Project/CMP (grades 6-8) have been selected by our teachers as best meeting the needs as stated above.
